

## **AUTO-STORM® HAIL**

Auto-Storm® HAIL is made up of a fully breathable 5-layer padded Auto-Storm AQUA® double-cover for extreme weather conditions as well as a silver coloured speciality cover which in case of hail is placed over top.

### **Instructions of Use**

Always park vehicle on firm and dry ground, such as asphalt, sand, gravel or stone. Grass, earth and soil is not suitable as they will attract humidity from below! We recommend uncovering the covers from time to time to allow fresh air to ventilate.

First cover the vehicle with the 4-layer thicker grey coloured "Auto-Storm" cover. Now follow with the 1-layer thinner grey coloured "AQUA" over top.

#### **In case of hail:**

In case of hail place the silver coloured cover over top. Connect the 5 short straps to the 5 snap-buckles located on both sides of the car. Wrap the 3 long storm-straps around the width of the car, using three different locations.

Practical Suggestion: We suggest laying the 3 long storm-straps on the ground and then driving the car over them. Cover the car with the car covers as previously described and then wrap the storm-straps around the car. Click the buckles together and tighten.

To clean, simply wipe down with some warm water and diluted "All Purpose Cleaner" such as "Mr. Propper". Do not use detergent or soap. Rinse well with cold water and hang to dry.

## Instructions for the AutoStorm® Hail belt system

**Pic. 1:** Lay out the 3 long belts where the vehicle is to end up. Then drive the vehicle directly over the belts.

**Pic. 2:** Now cover the vehicle with the covers supplied.

**Pic. 3:** Attach the 5 short straps to the clip on the side of the car.

**Pic. 4:** Pass the 5 short straps under the vehicle and snap them into the clips on the opposite side.

**Pic 5:** Finally, the 3 long straps that remain are wrapped around the vehicle and the clips are engaged, adjusted and tightened.
